Delivery Transmissions per Ticket -- Years 2001-2020

Shows how many member facility operators received each ticket on average. Ratio of members per ticket has lowered over time as improved GIS mapping has increased precision in defining dig site locations and member service areas.

After reaching a historic low in 2019, the ratio increased in 2020 as operators began to create multiple member codes to allow them to provide a unique response to the electronic positive response system for each of their facility types. For example, a city can now reply that storm drain has been marked, communications for traffic signals are clear, and power for street lights has been marked. The ratio is likely to increase in 2021 and 2022 as more operators realize the benefits of creating one member code for each of their...
